

The perfect defense.

Few things in the IWA can be as painful as adding up the values of your wrestler's holds, learning you formulated a perfect 501-point total, then discovering your wrestler lost an important title match due to the six-holds-in-a-row rule. This vote is not about whether to eliminate the rule: it's an attempt to address that particular pain point.

When you arm your wrestler with a perfect 501-point strategy, or your tag-team with a perfect 516 team total, or your six-man team with a perfect 521-pointer, should that accomplishment shield them from losing by the six-in-a-row rule that cycle?

My name is _____

- YES!** I'm in favor of adding this protection. Matches involving perfect strategies can already end early due to count out or disqualification. The six-holds-in-a-row rule is meant to simulate a squash match, but when a wrestler or team has a perfect strategy, it doesn't make sense that their opponents can get the three-count, since the strategy is supposedly *perfect*.
 - A perfect 501/516/521 total should also prevent that wrestler/team from being counted out or disqualified before reaching the 15th hold. (Note: If the final point spread is equal to the CO or DQ value, that will still be considered a count out or disqualification.)
- NO!** Do not add this exception. Even if you have what you think is a perfect strategy, it's not "perfect" if you allow your opponents to get the better of you for so many consecutive holds. Train harder.
